

Product Details

3M™ Graffiti Remover 3000 is formulated to quickly and effectively remove graffiti from brickwork and concrete surfaces. Effective on a wide range of graffiti substances including aerosol spray paint, permanent markers, crayon and emulsion paint. The solvent's liquid form allows for quick penetration and rapid breakdown of graffiti. Thanks to its high boiling point it also evaporates into the atmosphere more slowly, increasing efficiency, extending performance and reducing total costs. Unlike many other graffiti removers on the market, this product does not contain NEP (N-Ethyl-pyrrolidone) or NMP (N-Methyl-2-pyrrolidone) which can pose a significant risk to health. Has little odour, enhancing user comfort and efficiency – unlike traditional chemical removers which omit powerful odours and harmful vapours. Low environmental impact as the product does not contain aromatic, aliphatic or chlorinated solvents.

- Brickwork and concrete surfaces graffiti remover that is effective against aerosol spray paint, permanent markers, crayon and emulsion paint
- The solvent's liquid form allows for quick penetration and rapid breakdown of graffiti
- Does not contain NEP (N-Ethyl-pyrrolidone) or NMP (N-Methyl-2-pyrrolidone) used in other Graffiti removers, which can pose a significant risk to health
- Has little odour, enhancing user comfort and efficiency – unlike traditional chemical removers which omit powerful odours and harmful vapours.
- Low environmental impact as the product does not contain aromatic, aliphatic or chlorinated solvents
- Low environmental impact: 100% of components in GR1500 and greater than 90% in GR3000 are biodegradable by OECD 301, and both are REACH-compliant. Neither product contains aromatic, aliphatic or chlorinated solvents.
